**Subject:** FW: Pathogen reduction levels  
**Attachments:** Biosolids class.xlsx

Hi Johnny and Greg,

Layne Baroldi requested a spreadsheet showing the level of pathogen reduction achieved by biosolids facilities, and I put this together as with the composting GO, we may be getting more questions about which POTWs achieve Class B. The "Sub B" column means they don't meet Class B, or haven't provided any data on pathogen reduction. "B – P" means they haven't certified Class B, but have provided data in the past showing that they very likely meet Class B by anaerobic digestion or extended air drying.

I received a call from a POTW representative who was concerned that they could no longer send sub-Class B biosolids to the Hawes Rd. compost facility. Do you know if any other biosolids compost operations have requested coverage under the general order? I assume the Hawes Rd. facility had previously been issued an individual WDR. They had taken sub-Class B biosolids in the past.

Lauren
